

Lab Practice 1

Objective:

- ☐ Practice with C++
- ☐ Learn to debug code / check error log
- ☐ Review basic programming and getting familiar with C++ programming language

Date: (21th Friday August, 2026)

Instruction:

1. Write a C++ program to print out the following information:

Welcome to Data Structure and Programming class

My name is I am currently a year 2's student from *group* and *department*. I am so excited to start my class in this term.

2. Write a C++ program to:
 - a. Take 10 numbers as input and print them in a reverse order.
 - b. Count how many numbers are even in this array.
3. Implement a program to find both minimum and maximum in an array.

4. **Implement a Student Record System using Struct and Pointers**

Declare a Student struct with the following members:

- name (string)
- age (int)
- gpa (float)

Implement the following functions:

- printStudent(Student* s) — prints the student's information using a pointer
- updateGPA(Student* s, float newGPA) — updates the student's GPA using a pointer

In main():

- Create a Student variable and initialize it with your own information
- Create a pointer to that student

- Print the student info before and after updating the GPA
